

UVC lamps for disinfection

Alongside medium-pressure lamps for polymerisation we also offer a large spectrum of low-pressure and amalgam lamps, which are manufactured for specific customers and are largely used in the water, air and food industry for disinfection. Because we are also an overall supplier in this field, alongside the most varied kinds of lamps for all common systems, we also offer all accessories such as cladding tubes, sensors, etc.

The highest quality standards as well as first-class components and production procedures guarantee that our customers receive products that leave nothing to be desired with respect to their reliability, performance and duration.

The flexibility to respond promptly to individual customer wishes is very important to us. During implementation we make use of the most modern development technology and measurement technology. This makes it possible to develop systems and designs that are tailor-made and optimised for customers' requirements.

Replacement parts and services

Technical systems for UV disinfection require regular maintenance and replacement parts to maintain their operational readiness. Quick and reliable availability and the highest quality of the components are instrumental in this regard. Ultralight AG also offers the delivery of equivalent replacement parts for all common plants and systems.
